

Oil & Gas
Drilling & Production

HIGH PRESSURE TEST UNITS (HPTU)

Features & Options

- Electric Powered or Rig Air Powered Pumping Units
- Integral Recording Devices
- Factory tested with third party witness options
- Easy commissioning & serviceability
- Water/glycol test fluid compatible
- SS316& 316L construction for Corrosion Prevention

HIGH PRESSURE TEST UNITS (HPTU)

High Pressure Test Units (HPTUs) are required as an important procedural step to assess the quality of well operations. The HPTUs create pressurization to test the system's valves, actuators, and other control systems to ensure reliable, smooth operation of system equipment.

Pantex Ennerflo designs and produces HPTUs that range from 5,000 to 35,000 PSI working pressure to fully test any system. Our units can be trolley mounted or skid mounted to provide uncompromising performance in rigorous application use. Each HPTU is completely customized to meet exact customer and application requirements.
