

Ind. Hydraulic & Pneumatic
Systems

HYDRAULIC POWER UNITS

Features & Options

- L-Shaped, T-shaped and custom-designed reservoirs in SS/CS construction
- Tank-mounted or side-mounted Pumping Units
- Fixed Displacement/Variable Volume Units
- Operating Pressures up to 10000 psi
- Integral or Separate Accumulator Banks
- On-board PLC systems with custom software features built to order

HYDRAULIC POWER UNITS

Pantex Ennerflo's Hydraulic Power Units (HPUs) are custom designed and built for various industrial applications as per customer requirements. Each unit is self-contained and designed to accommodate any power source and operating pressure.

Typical design packages integrate pumps, reservoirs, relief valves, and filter and pressure valves. We also design and fabricate instrumentation panels with advanced circuitry features for enhanced control and situational awareness for mission vital operations.
